

GADING TAHTA WIDI

Software Engineering Student | Frontend & Mobile Development
+60162752739 | gadingtahta09@gmail.com | Kuala Lumpur, Malaysia | [LinkedIn](#)

PROFILE

Software Engineering student at Universiti Malaya seeking industrial training in frontend, mobile, or software engineering roles. Experienced in building React Native, React, and Next.js applications using TypeScript, JavaScript, Java, Git/GitHub, and Supabase. Currently developing CourseFlow, a student academic workflow manager for coursework, group projects, deadlines, and reminders. Focused on building practical user-facing applications with clean user flows, structured interfaces, and real student use cases.

EDUCATION

Universiti Malaya — Bachelor of Computer Science / Software Engineering

Kuala Lumpur, Malaysia | Expected Graduation: October 2028 | Industrial Training Availability: August 2026 – January 2027

- Relevant coursework: Software Requirements Engineering, Data Structures & Algorithms, Operating Systems, Network Technology Foundation, Machine Learning, IoT, Java Programming.

PROJECTS

CourseFlow — Student Academic Workflow Manager

Next.js, TypeScript, Tailwind CSS, Supabase, Telegram Bot Integration

- Developed a course-centered web app for managing personal coursework tasks, shared group projects, deadlines, and reminders in one academic workflow system.
- Built key features including My Tasks, shared projects, dashboard priority view, Kanban board, calendar view, course filtering, archive/history handling, and project progress tracking.
- Designed risk-based task prioritization using due date proximity, task progress, difficulty, and overdue status to highlight critical academic work.
- Integrated Telegram assistant and reminder workflows for checking urgent tasks, upcoming deadlines, closest deadlines, and active projects from chat.

BudgetBite — Mobile Budgeting & Adaptive Meal Planning App

React Native, Expo, TypeScript, Supabase, React Navigation

- Developed a mobile app that helps students plan meals based on budget, pantry items, grocery spending, and daily food decisions.
- Built a 17-screen application structure including onboarding, budget setup, dashboard, pantry, transaction history, insights, meal plan generation, grocery list, receipt logging, and settings.
- Implemented navigation flow using React Navigation with separate onboarding, main tab, and feature-specific screens.
- Designed the product logic around an adaptive daily meal planner, replacing the weaker idea of generic “unlimited AI meals” with a more practical budget-and-pantry-based planning flow.

Satori Rattan Furniture Website

React, React Router, Tailwind CSS, UI/UX Design

- Developed a multi-page B2B website for a rattan furniture manufacturer targeting business buyers, project clients, and regional partners.
- Structured routes for Home, Projects, Collections, Bespoke, Craftsmanship, About, and Contact pages using React Router.
- Designed responsive page layouts with clear visual hierarchy, brand storytelling, product showcase sections, and conversion-focused calls to action. Focused on creating a professional business-facing website instead of a generic static landing page.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL

Frontend & Mobile: React Native, Expo, React, React Navigation, Tailwind CSS, Responsive UI

Backend & Database: Supabase, basic REST API usage, SQL fundamentals

Tools: Git, GitHub, VS Code, Postman, Figma

Software Engineering: OOP, data structures, sorting/searching, requirements engineering, use case modeling

Networking & IoT: Cisco Packet Tracer, IPv4/IPv6, VLAN, DHCP, static routing, Arduino basics

ADDITIONAL EXPERIENCE & STRENGTHS

- Comfortable working in student software teams, dividing modules, reviewing requirements, and preparing presentation-ready documentation.
- Built Java coursework involving file handling, ArrayList usage, insertion sort, binary search, recursion, and basic data management logic.
- Able to explain technical decisions clearly in reports and presentations, especially when connecting implementation choices to user needs.
